Serine proteinase (EC 3.4.21.-) [imported] - Brucella melitensis (strain 16M)
C;Species: Brucella melitensis
C;Accession: AB3639
R;DelVecchio, V.G.; Kapatral, V.; Redkar, R.J.; Patra, G.; Mujer, C.; Los, T.; Ivanov. Maccolla meliter proc. Natl. Acad. Sci. U.S.A. 99, 433-448, 2002
A;Title: The genome sequence of the facultative intracellular pathogen Brucella melite A;Accession: AB3639
A;Status: preliminary
A;Reference number: AD3252; PMID:11756688
A;Status: preliminary

                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                       pyrophilus, a Gram-negative, strictly chemolithoautotrophic Anality of pyrophilus, a Gram-negative, strictly chemolithoautotrophic Anality of as marine bacterium which grows optimally at 85 deg C and pH 6.8. Newly identified polynucleotides (AAT79321-30) encoding claimed esterases (AAW23069-77, AAW23089) were recovered from genomic gene cargines in host cells, and as probes to identify related sequences. The setrases are stable at high temperature and in organic rompounds used in pharaceutical, agricultural and other chemical industries. A method is claimed for transferring an amino group from an amino acid to an alpha-keto acid using scatters in carbohydrate in lighin removal in paper and pulp manufacture, in carbohydrate derivative synthesis, in fermentable sugar production from lighnocellulosic waste, in the study of plant wall tructure, plant resistance to disease and organic and the resistance to disease and organic matter decomposition and to select plants bred for production of highly degradable animal feeds.

Addition to marrine strictly chemolithoautotrophic knall
gas bacterium that grows optimally at 85 deg C and pH 6.8

Newly identified polynucleotides (AAT7921-30) encoding claimed
sterases (AAW23069-77, AAW23089) were recovered from genomic libraries.

They can be used for recombinant production of the enzymes in host
cells, and as probes to identify related sequences. The esterases
are stable at high temperature and in organic solvents, making them
superior for use in production of pure chiral compounds used in
pharmaceutical, agricultural and other chemical industries. A
method is claimed for transferring an amino group from an amino
acid to an alpha-keto acid using a claimed esterase. The enzymes
cmay also be useful as ripening stearters in cheese making, in lignin
removal in paper and pulp manufacture, in carbohydrate derivative
synthesis, in fermentable sugar production from lignocellulosic
waste, in the study of plant wall structure, plant resistance to
disease and organic matter decomposition and to select plants bred
for production of highly degradable animal feeds.

                                                                                                                                                                                                                                                                                                                                                                             Amino acid sequences AAY38499-Y38944 represent Neisseria meningitidis and N. gonorrhoeae antigenic proteins. They are encoded by open reading frames (ORFs) AAZ11972-Z12358. The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria
                                                                                                                                                                                                                                                                                                                                        infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB;

                                                                                                                                                                                                                                                                      Amino acid sequences AAY38499-Y38944 represent Neisseria meningitidis and N. gonorrhoeae antigenic proteins. They are encoded by open reading frames (ORFs) AAZ11972-Z12358. The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Neisseria n

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Amino acid sequences AAY38499-Y38944 represent Neisseria meningitidis and N. gonorrhoeae antigenic proteins. They are encoded by open reading frames (NFE) AAZ11972-Z12358. The antigenic proteins, their fragments, their mucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9 INLVLSGCAAKGIAHIGVLKAINELGIRVRALSGVSAGAIVSVFYASGYSPEGMFSLLKR

```
The present sequence is a human cyclic nucleotide-
associated protein-2 (CNAP-2), identified in Incyte clone 3149674,
that is isolated from ADRENON04 cDNA library. It is expressed in
nervous, reproductive, cardiovascular and hammatopoietic/immune tissues.
                                                                                Isolated cyclic nucleotide associated proteins useful for preventing, diagnosing and treating cell proliferative, autoimmune/inflammatory, neurological, vision, reproductive and smooth muscle disorders -
                                                                                                                                                                                                                                                                                                                                                    Binding-site
                                                                                                                                                                                                                                                                                                                                                                       Binding-site

                                                                                                      This protein comprises the whale mat sample 11.801 esterase es9. Newly identified polynucleotides (ART79321-40) encoding esterases (AM23069-88), some of which are claimed, can be used for recombinant production of the enzymes in host cells. The esterases are stable at high temperature and in organic solvents, making them superior for use in production of pure chiral compounds used in pharmaceutical, agricultural and other chemical industries. A method is claimed for transferring an amino group from an amino acid to an alpha-keto acid using a claimed esterase. The enzymes may

                                                                                                                                                                       The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                    문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a protein (ABP25413-ABP30895) from group B CC streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus yvogenes), comprising one of 5483 sequences (S1), given in CC the specification. The proteins have antibacterial and antiinflammatory CC activity. (I), mucleic acids encoding (I), ABN66044-ABN71826 and CC antibactes that bind (I) are used in the manufacture of medicaments for CC the treatment or prevention of infection or disease caused by CC Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. CC Mucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by CC acid encoding (I) may be used to treated may be meningitis. Nucleic CC acid encoding (I) may be used to recombinantly produce (I) and may be CC used in gene therapy. Antibodies to (I) are used for affinity immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                     Query Match

The polynuclectides have potential antiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E. coli infections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia, pyslonephitis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of nature 82/D+A-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (1), nucleic acide encoding (1), ABMS6044-ABM71526 and antibodies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (1) are used to detect Streptococcus in a biological sample. (1) is used to detecraine whether a compound binds to (1). A composition comprising (1) or a nucleic acid encoding (1), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be encoding (1) may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity contractoring product or trecombinantly produce (1) and may be encoding or produce or distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  æ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ន្តន្តន
                     CC The invention relates to a protein (ABP25413-ABP30895) from group B CC streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus youngers), comprising one of 5483 sequences (31), given in CC the specification. The proteins have antibacterial and antiinflammatory CC activity. (1), nucleic acids encoding (1) ABN66044-ABN71526 and CC antibodies that bind (1) are used in the manufacture of medicaments for CC the treatment or prevention of infection or disease caused by CC Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. CC Nucleic acids encoding (1) are used to detect Streptococcus in a bind to CC (1). A composition comprising (1) or a nucleic acid encoding (1), may be used as a vaccine or diagnostic composition. The disease caused by CC Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (1) may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity aronacon and antipolarian and may be correctly and may be used for affinity and may be moreains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                 New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein -

AMM25025 to AAM99904 encode the human proteins given in AAM25225 to AAM2503. The proteins can have activities based on the tissues and cells they are expressed in, such as: antinflammatory, antirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrime; cardiant; cardiavascular; antianemic; antiapacental; endocrime; cardiant; cardiavascular; antianemic; antiagram; haemostatic; vulnerary; antidateric; osteopathic; darmatological; antialteric; unlnerary; antidateric; oytostatic; neuroprotective; antidepressant; nootropic; antidateric; cytostatic; neuroprotective; antidepressant; nootropic; antidateric; oytostatic; neuroprotective; antidepressant; nootropic; antidateric; oytostatic; neuroprotective; antidepressant; nootropic; conciding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polymucleotides are useful for screening for agondtis or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, renumented arthritis, septic shock, panoreatitis, cardiac dysfunction, infections, autoimmunity, genetic diseases, haematopoietic disorders, and infections, understant and insured the infections, understant and insured the antipoletic disorders, and infections, understant and insured the antipoletic disorders, and infections, understant and insured the antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and antipoletic disorders, and anti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 72 SAMRVHIDGSLWRYVRASMSLSGYMPPLCDPKDGHLLMDGGYINNLPADVARSMGAKVVI 131

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
